logion, the first blockchain platform securing the new corporate token economy

David Schmitz

About us

➢bit4you is the first crypto exchange operating from Belgium at European level with a special focus on the safety of environment and transactions

➢our team is also closely interested in blockchain technology's potential, hence our investments in the logion project

➢David Schmitz – member of TechLawyers EU network

What's logion?

A Proof of Authority type's blockchain framework in a Quorum-Ethereum environment whose validators/nodes will be EU public Officers

This network will be able to support secure tokenization, corporate governance, crowdfunding operations... in private and public mode

Why this choice of framework ?

Today, many blockchains networks have implemented PoS or PoW-type consensus, are public or private

It also requires validators – what kind of?

They are not necessarily identified but with PoW and PoS, it means the holders of the biggest computing capacity or the most important token holders

Risks for the market, customers…

- Who are the validators?

- Does the network always remain decentralized?

- Does the security of the registry ensure?

- How to manage an incident?

- Who is in charge of the liability?

Value proposition

Our blockchain approach provides a solution to these challenges

✓a complete control of the process chain

✓supervised by public officers

✓provide an interconnection of legal, economic and institutional specialists in order to prepare projects before blockchain integration

✓enable the privatization of transactions, partially or totally

✓perfectly secure thanks to Bit4You's expertise (KYC, fraud detection, AML, digital signature...)

Additional benefit

A web plateform to manage the economic and legal aspects before the blockchain integration, with partners or through our own technologies

SCM
SERAPHIN CONTRACT MANAGEMENT

Draft, negotiate, sign & manage you own smart documents!

Assets tokenization

Funds raising

Crowdfunding

Corporate governance

Content secure management

Documents secure exchange
